DETAILED ACTION

1. This Application has been examined. The claims 1-16 and 18-22 are allowed.

Reasons For Allowance

2. The following is a statement of reasons for allowance: None of the cited art teaches or suggests that a luminescent display comprising a second capacitor coupled between the power supply line and the second transistor for storing a voltages corresponding to the data signal; and a second switch for electrically isolating a second main electro of the first transistor from the luminescent element during voltage-charging of the first capacitor in response to a control signal, the first transistor supplying a current corresponding to the sum of the voltage charged in the first and second capacitors as claim 1; or a third transistor having a control electrode thereof coupled to a previous scan line for a pixel that was previously scanned, and coupled between the power supply line and the first and second capacitors; and a fourth transistor having a control electrode thereof coupled to the previous scan line, and being coupled between the second capacitor and the second main electrode of the first transistor, the first transistor supplying a current corresponding to a voltage charged in the first and second capacitors as claim 7; or applying a selection signal for selecting the pixel coupled to the scan line; and receiving the data voltage from the data line in response to the selection signal, and supplying a current corresponding to the sum of the compensated gate voltage and the data voltage to the luminescent element as

claim 13; or wherein a first voltage is charged in the first capacitor during a first period, and a second voltage is charged in a second capacitor during a second period as claim 18.
